

COMPANY PROFILE

DRAWERS AND DOORS

DRAWERS AND DOORS

Ergonomics meets beauty.

Since 1967, we have been exceptional partners for designers and companies that need stainless steel components for bar and restaurant furnishings.

Tailored quality on an industrial scale.

Ronda represents the point of reference for stainless steel components in the operational environments of food and beverage professionals, thanks to the continuous aesthetic and functional research of its products.

Ronda is the **leading company in Italy** in the production of stainless steel components for bars and catering structures.

A **wide range of products** that combine maximum practicality, robustness, and ease of maintenance with the elegance of Italian style, essential lines, and innovative shapes.

- Drawing
- Molding
- Bending
- Welding
- Laser processing

DEEP DRAWING

→ Laser marking

→ Punching

→ Welding

→ Brushing

A comprehensive range that ensures maximum convenience, durability, and ease of maintenance: from material selection to component engineering, the outcome of design, and rigorous strength testing.

PRODUCTS

Innovative stainless steel supplies, efficient and durable, designed to withstand the daily demands of catering facilities.

FORMING

RONDA.
EVERYTHING
FORMING.

Process, method and vision make a system.

Forming is much more than a technique. For Ronda it's a working system. It involves several metalworking techniques, such as stamping, bending, and cold hydroforming. This process shapes the way we set up every step, from the initial prototype and design phases to the creation of custom moulds and final installation.

Everything takes place at our production plants thanks to our fifty years expertise: **industrial standards and exclusive style.**

WATER POWER. RONDA CONTROL.

Hydroforming makes everything
easy, efficient and accessible.

of progressive stamping

THE ONLY

one in Europe in terms
of capacity

50%

saving on mould
production costs

Ronda products are subjected to very rigorous reliability tests so that, in addition to beauty and ergonomics, they can ensure the highest resistance and durability over time.

All production phases take place under strict controls, from the arrival of the raw material to the packaging.

Ronda operates according to the strictest international standards and regulations.

The Quality Certification ISO 9001 obtained by the company is a further guarantee of the reliability of its products and the technologies used to build them.

The items have been tested with reference, where applicable, to the standard ISO 7170 “Furniture Storage units - Determination of strength and durability”.
